Behavioural Based Safety

INTRODUCTION

- If you think safety's expensive, try having an accident ... Successful safety management involves understanding human factors and having the ability to correct human error to improve safety habits.
- For many years there has been an emphasis on physical and engineering controls and on safe working practices and procedures. Increasingly, however, studies have shown that technical measures alone will not eliminate accidents in the workplace. Increasing emphasis must be placed on how people fit into, and interact with, their environment and work systems, and on how their performance affects safety.
- Managing human failures is essential to preventing major accidents, occupational accidents, and ill health, all of which can cost businesses money, reputation and potentially their continued existence.
- This highly interactive Behavioural Based Safety training course will provide you with all the necessary skills and talents to create a management approach which engages, motivates, and sustains safe behaviours at work. The training course takes a systematic approach, examining the motivation underlying behaviours, in order to increase safe behaviour.

This training course will highlight:

- The key components of an effective behavioural based safety approach
- The relationship between human factors and safety performance
- How to positively influence the performance of employees
- How to develop and sustain a behavioural change programme
- The visible business benefits

OBJECTIVES

At the end of this training course, you will learn to:

- Develop a clear understanding of human factors
- Understand the consequences of behavioural acts and omissions as prime causes of accidents and adverse events
- Understand the key role of managers and supervisors in influencing safety performance
- Develop skills for identifying, evaluating, and implementing cost effective solutions for influencing behavioural change
- Develop skills to successfully implement and sustain a behavioural change programme

ORGANISATIONAL IMPACT

By successfully managing the behaviour of your workforce you will ensure fewer accidents and safer performance leading to reduced business costs. This will improve your business reputation and profile. The organizational impact will be:

- Improved safety performance of staff
- Better teamwork
- Improved staff morale through improved behaviour
- The professional development of staff
- A reduction in incidents and losses
- An increased reputation as a health and safety leader

PERSONAL IMPACT

Course participants will learn how to effectively identify, understand, and positively influence the behaviour of their staff using a variety of proven management techniques and interpersonal skills. The personal impact will be:

- Appreciating the importance of human factors
- Receiving practical methods to improve safety behaviour
- Developing the necessary skills for leadership, management, and supervision
- Appreciating the importance of human factors and teamwork
- Understanding how improved behaviour leads to a successful safety culture
- Learning how to implement and sustain behaviour change programme
