Data Governance, Privacy with General Data Protection Regulation (GDPR) Masterclass

INTRODUCTION

- The Facebook and Cambridge Analytica scandal, which revealed that Facebook failed to protect the data of millions of users, shocked the world. In combination with the largest ever data protection in the world - the General Data Protection Regulation (GDPR), underscores why Data Governance, Privacy and Data Protection is so critical for organisations to safeguard their customers' data all over the world. With the increase in cyber security threats too, all organisations are now at an all time high to take action now.
- GDPR is the largest shift in data protection and privacy legislation in Europe for over a generation and with potential extraterritorial effect, all organisations across the Middle East and Asia Pacific may need to comply with GDPR even though the company is not based in Europe. Data Protection will only increase now in all parts of the globe and companies need to take actions to protect, secure and manage personal data more effectively.
- Failure to comply with GDPR exposes organisations to unprecedented regulatory, financial, and reputational risk resulting in sizeable fines for serious breaches. Financial penalties are steep: Up to EUR20 million or 4% of global annual turnover. In addition to financial penalties, noncompliance may also expose organisations to regulatory investigations, sanctions, claims from individuals and class actions, including the possibility of being charged with criminal offences.

This training course on Data Governance, Privacy with General Data Protection Regulation (GDPR) Masterclass will highlight:

- Learn how to apply data governance, privacy and data protection controls to help reduce risks, issues and threats through policy, strategies and systems
- Manage the increasing number of audit, risk and legal compliance standards related to data protection, privacy and cyber and information security to protect data and peoples identity
- Build solutions that meet ISO standards, global data protection best practices, GDPR and industry regulations
- Develop systems and tools to help establish and implement data governance
- Create an action plan and learn from industry best practices to establish data governance and data protection for their organisations

OBJECTIVES

At the end of this training course, you will learn to:

- Learn the Data Governance framework and Legal requirements
- Get acquainted with the GDPR and its area of application
- Understand the Legal elements of Data Protection and Data Privacy in USA, EU, Russia, Middle East, Asia and Africa
- Acquire the knowledge of ISO27000, ISO27001, ISO27002 and related standards
- Prepare and implement Data Governance and Data Protection projects
- Prepare and perform audits of their data management system and their data protection policies

TRAINING METHODOLOGY

- This GDPR Masterclass training course will combine presentations with interactive practical exercises, supported by video materials, activities and case studies. Delegates will be encouraged to participate actively in relating the principles of data governance, privacy, data protection and cyber and information security to the particular needs of their workplace.
